### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Walter Egbert, III, Esq. on September 29, 2005.

The application has been amended as follows:

### **IN THE CLAIMS**

In claim 1, line 1, after "comprising:" insert --a single continuous shaft including--;  
line 2, after "sheath," insert --and--.

2. The following is an examiner's statement of reasons for allowance: Claim 1 is amended above to recite an endoscope comprising a single continuous shaft including a sheath, an articulation section attached to a distal end of the sheath, and a distal tip attached to a distal end of the articulation section. In combination with the remaining elements of claim 1, this claim is now allowable over the prior art of record. Kuramoto et al. ('030) shows a similar device which includes separate sheaths, the inner one (142, Fig. 22) movable inside the other (137), wherein one optical channel is on one sheath and the other optical channel is on the other. Even though the inner one can be fixed with respect to outer sheath at certain times, they are required to be

Art Unit: 3739

movable for proper operation (note Fig.23). Therefore, Kuramoto et al. fails to teach or suggest a single continuous shaft including a sheath, an articulation section and a distal tip, wherein the objective lenses of both optical channels are located on this single continuous sheath in the locations as claimed. Regarding the proposed combination of El Gazayerli ('146) and Kuramoto et al. as previously presented by the Examiner, even when obviously modified to include two separate observation means adjacent the cartridge (16) and the anvil (24) of El Gazayerli, there is no explicit teaching or fair suggestion in either of these references, or any other reference of record, to combine all of the separate sheaths (note that conduit 12 is disclosed as having three or more channels, at least one for accommodating the anvil 24 and one for accommodating cartridge 16) into a single continuous shaft including a sheath, articulating section and distal end, wherein the observation elements are located on the shaft in specific locations as claimed. Therefore, claim 1, as well as all claims depending therefrom, are allowable over the prior art of record.

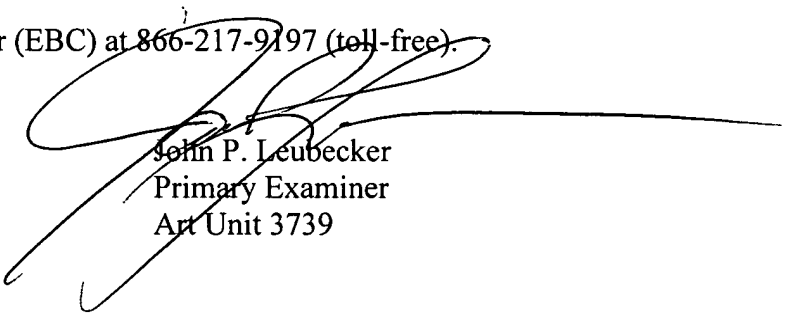

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John P. Leubecker whose telephone number is (571) 272-4769. The examiner can normally be reached on Monday through Friday, 6:00 AM to 2:30 PM.
